

Rahul Tulani

Phone: +1 647-979-9791 | Email: rahul.tulani13@gmail.com | Location: Toronto, ON | [Linkedin](#) | [Portfolio](#) | [GitHub](#)

Software Developer with 6+ years of experience specializing in Java, Python, SQL and cloud technologies. Passionate about building scalable applications, designing robust APIs, and improving software efficiency and maintainability.

TECHNICAL SKILLS

- **Programming:** Python, Java, JavaScript, TypeScript, Object-Oriented Programming, SQL, PL/SQL, Unix Bash, C++, GraphQL
- **Frameworks:** Angular, Node.js, ReactJS, Java EE, Spring Boot, Express, JUnit, Mockito, Playwright, Kafka, Hadoop-HDFS & MapReduce
- **Databases:** Oracle RDBMS, MySQL, PostgreSQL, NoSQL - DynamoDB, MongoDB, Cassandra
- **Web & Cloud:** HTML5, CSS3, REST, JSON, XML, Google Cloud Platform (GCP) - Cloud Firestore, Cloud Functions, AWS - Lambda, Elastic Beanstalk, EKS, S3, SES, VPC, CloudFormation, API Gateway, Azure - DevOps, Functions, Blob storage
- **Tools & Technologies:** IntelliJ, Eclipse IDE, Oracle WebLogic Server, Jenkins, SonarQube, GIT, Maven, Gradle, CI/CD, Kubernetes, Docker, JFrog, JIRA, ETL, K2VIEW Translator Studio, K2VIEW Fabric, Informatica, Elasticsearch, Numpy, Pandas
- **Development Practices:** SDLC, Microservices, API Design, Design Patterns, TDD, Agile, Scrum
- **Key Skills:** Problem-solving, Data structures & Algorithms, Basic Machine Learning, Analytics
- **General Skills:** Detail-oriented, Adaptability, Communication Skills, and Teamwork Skills

PROFESSIONAL EXPERIENCE

Canada Revenue Agency

Toronto, Canada

SDE II - IT Developer

Sep 2022 - Mar 2025

- Developed scalable **Restful APIs** for various financial services using Java for Individual, Business, and Trust account users.
- Engineered the integration of **Java** REST APIs with a **TypeScript**-based Angular system to enhance CRA Taxpayer portal features.
- Led the migration of legacy Struts services to Java by analyzing and implementing complex APIs and modules within a scalable **Service-Oriented Architecture (SOA)**, ensuring maintainability and seamless system integration.
- Designed and implemented **modular, reusable components** across **5 major user services** in a **team of 8**, while working collaboratively with Product Owners and designers in an **agile** environment.
- Architected backend systems for public-facing web services supporting over **28 million** Canadians; collaborated with stakeholders and authored JIRA stories to drive technical planning and execution.
- Piloted development of core dynamic APIs to enable redirection for **3 web features**, reducing integration effort by **60%** and significantly improving system availability by **50%**.
- Automated setup of local development environments for **50+ cross-team services** using **Python** scripts and meticulously documented the onboarding process, reducing developer setup time by **90%** and boosting team productivity.
- Refactored existing Java code into reusable interfaces, and modules, reducing complexity by **60%** and improving code maintainability.
- Implemented robust **CI/CD pipelines** in **Jenkins**, integrating with **JUnit**, and **SonarQube** for automated testing, code quality analysis, and streamlined deployments — accelerating release cycles by **25%** and improving code reliability.
- Delivered **70%** test coverage using JUnit, ensuring alignment with business requirements and user-focused scenarios.
- Providing technical assistance to developers in designing solutions, code walkthroughs, and local development environment setup.
- Orchestrated production sign-on deployments for multiple web services, including health check monitoring across a **64-server cluster**.
- Led root cause **log analysis** of critical production issues and deployed emergency fixes, improving system reliability and uptime.

Akkodis

Toronto, Canada

Software Engineer

Jan 2022 - Aug 2022

- Led enterprise data migration from on-premise **Oracle** to **Kafka** topics on AWS EC2 using **K2View Fabric**, enabling real-time processing.
- Developed and maintained Java-based data transformation scripts for seamless migration of **11 million** subscribers to the cloud.
- Streamed data from Oracle to **15** Kafka topics, persisting event records in Cassandra to support an event-driven architecture.
- Implemented efficient **data models and mappings** using K2V Fabric and Kafka, optimizing data processing and integration workflows.
- Implemented Oracle database integration in Java using **JDBC** for efficient extraction, transformation, and loading workflows.
- Debugged and resolved local testing issues while analyzing real-time production queue messages to ensure seamless system performance and reliability.

CSG Systems International, Inc.

Bangalore, India

Development Consultant

Oct 2020 - Sep 2021

- Implemented PL/SQL ETL data pipelines to transform and migrate data of **50K+ subscribers** to the Singleview billing system.
- Developed **optimized SQL queries** for data pipelines to perform high-volume reads and writes during enterprise database migration.
- Optimized code execution for monthly production runs, cutting commercial migration time by **30%**.
- Conducted requirement analysis in collaboration with stakeholders to architect and develop scalable features for the new SV product.
- Developed the code for various product applications using programming languages - **Core Java, Perl**
- Executed Functional and Unit Testing therefore supporting testing teams during the User Acceptance Testing phase.

Amdocs

Pune, India

Software Developer

June 2018 - Oct 2020

- Led the end-to-end Extraction, Transformation, and Loading (ETL) development of billing analysis software for Telecom clients.
- Automated data migration reconciliation between legacy and Amdocs billing systems, achieving KPI targets of over **95%**.
- Optimized Oracle Database **performance tuning**, ensuring timely deployment of large datasets of **2 million** enterprise subscribers.
- Performed manual analysis and **developed automatic analysis** solutions using **Python** to reconcile Legacy and Amdocs' billing systems.
- Designed an integrated **Oracle SQL & Python solution** to automate the complex Singlebill accounts' charges comparison solutions
- Enhanced code efficiency by automating bug detail parsing into Data Warehousing tools, reducing deployment runtime by **50%**.
- Developed **UNIX** Shell scripts to devise splitting, mixing and sorting algorithms increasing billing execution throughput by **4 times**.
- Collaborated with global teams across key hubs—Australia, Israel, India, Ireland, and Brazil—to achieve project deliverables.

PROJECTS

Bed & Breakfast: Multi-cloud Serverless web application

(AWS Lambda, Google Cloud functions, Python, API Gateway)

- Integrated multiple cloud services from AWS and GCP to build Food, Tour and Hotel services as part of the serverless application.
- Built serverless RESTful APIs with AWS Lambda, integrated via Amazon API Gateway for backend processing without managing servers.
- Developed key modules like Authentication, Machine Learning, Online Assistant, Message parsing and Data visualization.

Document Manager: Cloud Storage Drive

(AWS Lambda, Storage services, CloudFormation, JavaScript)

- Developed a Cloud storage web application using AWS services like Elastic Beanstalk, DynamoDb, S3, Lambda, SES, VPC
- Implemented AWS CloudFormation to automate application infrastructure provisioning.
- Developed and deployed an independent URL shortener microservice using AWS Elastic Beanstalk to shorten file URLs for sharing.

Cozmos: An eCommerce Shopping Platform

(MySQL, Express, ReactJS, Node.js)

- Using NodeJS and Express, developed the backend RESTful APIs for various features like product catalog, cart, wishlist, and purchase.
- Implemented front-end User Interface and Experience using ReactJS, JSX and CSS3.
- Built comprehensive MySQL database design and integrated it for full-stack application development.

Stock Price Analysis & Prediction

(Python, Data Science)

- Developed Supervised Machine Learning models to predict stock prices.
- Following the CRISP-DM process, Linear Regression and LSTM Neural Network were successfully implemented.
- Generated insights into the stock price comparison between before and after COVID-19.

CentDb - Centralized Database Management System

(Java, SQL, DBMS, File I/O)

- Developed a custom file formatted and console interface database management system using JAVA.
- DBMS application allows users to execute standard SQL DDL, DML, DQL and DCL operations.
- Integrated the Database Analytics and Data Modelling utilities to the application.

Task Manager

(Java, Spring Boot, MySQL, JUnit)

- Developed a Spring Boot Java application with a MySQL database and CI/CD pipeline for a JIRA-like task management system.
- Incorporated features such as a user login/registration module using JWT authentication, creating teams, managing projects and tasks.
- Ensured adherence to Clean Code practices, Test-Driven Development (TDD), SOLID principles, and design patterns.

Online Password Checker

(Python, Flask)

- Developed a Python web app to assess password security by checking past compromises.
- Implemented REST APIs using Flask and secured user inputs with SHA1 encryption for test case validation. Link: [Application](#)

EDUCATION

Dalhousie University

Master of Applied Computer Science

Halifax, Canada

Sep 2021 - Dec 2022

Punjab Engineering College (Deemed To Be University)

Bachelor of Technology in Electronics & Communication Engineering

Chandigarh, India

July 2014 - June 2018

CERTIFICATIONS & TRAINING

- [Microsoft Cloud Certification: Certified Azure Fundamentals](#)
- [Udemy: Complete Python Developer in 2020: Zero to Mastery](#)
- [Hackerank: C++ \(Basic\) Certificate](#)
- [Hackerank: SQL \(Basic\) Certificate](#)
